

Redbeds (Siltstone, Sandstone, Gypsum) Sparse Vegetation

COMMON NAME	Redbeds (Siltstone, Sandstone, Gypsum) Sparse Vegetation
SYNONYM	Redbeds Rock Outcrop
PHYSIOGNOMIC CLASS	Sparse Vegetation (VII)
PHYSIOGNOMIC SUBCLASS	Consolidated rock sparse vegetation (VII.A)
PHYSIOGNOMIC GROUP	Sparsely vegetated cliffs (VII.A.1)
PHYSIOGNOMIC SUBGROUP	Natural/Semi-natural (VII.A.1.N)
FORMATION	Cliffs with sparse vascular vegetation (VII.A.1.N.a)
ALLIANCE	Rock Outcrop/Butte Sparsely Vegetated Alliance

CLASSIFICATION CONFIDENCE LEVEL 3

USFWS WETLAND SYSTEM Upland

RANGE

Globally

This association has been derived based on data from the Black Hills. Rangewide information has not yet been compiled.

Wind Cave National Park

The redbeds sparse vegetation type is uncommon and restricted to the Red Valley in the eastern part of the Park.

ENVIRONMENTAL DESCRIPTION

Globally

This association has been derived based on data from the Black Hills. Rangewide information has not yet been compiled.

Wind Cave National Park

Redbeds sparse vegetation is found in areas underlain by red sandstones and siltstones of the Spearfish Formation. Gypsum lenses are common, and form resistant bands and caps. Soils are poor, loose, and easily eroded. This type is found on level sites and slopes of varied steepness and aspect.

CHARACTERISTIC SPECIES

Globally

Information not available.

Wind Cave National Park

Heterotheca villosa, *Paronychia depressa*, *Eriogonum pauciflorum*

VEGETATION DESCRIPTION

Globally

This association has been derived based on data from the Black Hills. Rangewide information has not yet been compiled.

Wind Cave National Park

The redbeds sparse vegetation type typically has less than 10% vegetative cover. Species that are often present include sand cherry (*Prunus pumila*), prairie sagebrush (*Artemisia frigida*), needle-and-thread (*Stipa comata*), little bluestem (*Schizachyrium scoparium*), hairy golden-aster (*Heterotheca villosa*), Rocky Mountain nail-wort (*Paronychia depressa*) and wild buckwheat (*Eriogonum pauciflorum*).

MAP UNITS

Redbeds sparse vegetation corresponds to map unit 3, gypsum rock outcrop/redbeds sparse vegetation, on the Wind Cave vegetation map.

COMMENTS

Wind Cave National Park

Redbeds sparse vegetation develops on naturally eroded sites underlain by the Spearfish Formation. They occur as small inclusions in grassland vegetation. Gypsum zones within the redbeds also are sparsely vegetated, with the same species commonly found.

The redbeds sparse vegetation type is uncommon and restricted to the Red Valley. Many of these stands were visited during vegetation mapping.
